

PUBLISHING AND STYLE SHEETS

Fully automated publishing into multiple languages is a key to your successful DITA implementation. Suite Solutions gives you that “magic button” to deploy your content with ease in the formats that you and your customers need.

With Suite Solutions expertise at your side, you don’t need to compromise on fully automated, high-quality output to PDF, online help, knowledgebase, mobile devices, IETM and more – maximizing your content reuse and fully localized to the languages you need.

Multi-Channel

Reap the benefits of DITA by reusing your content to a multitude of output formats.

- PDF – multi-chapter books, quick start manuals, foldouts
- HTML – Online help, Webhelp, Eclipse Infocenter, Apple Help
- Mobile devices - Kindle, Nook, iPod/iPad, Android
eBook - Kindle, Nook, iPod, iPad, Android, ePub
- Dynamic web, IETM Class IV and V SCORM, eLearning, training guides

Multi-Lingual

Achieving your “magic button” means full support for multiple languages and their particular requirements. Using a single style sheet you can publish to European and Asian languages, Far Eastern languages such as Chinese, Japanese, and Korean, as well as bidirectional languages such as Arabic and Hebrew. Support includes index sorting algorithms required for languages such as Chinese and Japanese. Publish your multi-lingual content to a single output, such as multi-lingual quick start guides and reference cards.

High Performance

High-end outputs require high-end dexterity and performance. Suite Solutions enables you to exceed expectations.

- Multiple page sizes: US Letter, A4, any custom size
- Hi-resolution for print and low-res for online viewing
- Support for draft and release versions, watermarks, cropmarks, change bars, change tracking
- On-the-fly graphic conversion for web
- Support for SVG, EPS, other widely used formats
- Auto-generated index, glossaries, jump lists
- Multi-lingual documents
- Multi-column, landscape tables, thumb tabs
- Context sensitive help, merged CHM
- Full support for DITA 1.2 and learning content

Customer Driven

Create your own knowledge base and support center using Eclipse Infocenter or other versatile platforms for delivering dynamic content. Suite Solutions helps you:

- **Customize** the content formatting, skin, navigational controls and icons
- **Direct content** to users based on their context and role by enabling filtering, faceted search and indexing
- **Gather feedback** by enabling readers to send comments, fill-in surveys, email content to other
- **Implement Google Analytics** to gather statistics on who is visiting your content and how frequently
- **Generate PDF on-demand** to give your users exactly what they need when they need it
- **Easy access to localized content** within a single delivery application. Allow your users to easily switch to any language you provide.

Built to last

- **Modular Design** — Style sheets are developed using best practices to be modular, flexible and maintainable. By using plug-ins, we make deployment quick and easy to update.
- **Development processes** — We treat your style sheets like any other mission-critical software application, including source code control, incremental update management, issue tracking, testing and QA, documentation and release notes.

- **Automated Testing** — As your publishing needs grow, so will your style sheets. We implement innovative XML-based automated tests directly into your style sheets so you can leverage your style sheets for more complex formatting while verifying that earlier functionality stays intact.
- **Documentation** — We all understand the importance of good documentation. Your publishing tool chain is no different. We document the functionality of your style sheets so your team can easily set up and generate your publications.
- **Integration with CMS** — We work closely with your CMS vendor to integrate your style sheets seamlessly including passing publication parameters and output options, implementing filtering and conditional processing, passing language information and providing for any other implementation requirements.

Maintenance and Support

Suite Solutions offers convenient and cost-effective maintenance and support for your style sheets. We enable a convenient framework for you to make ongoing tweaks and additions to your style sheets to support your DITA implementation as it matures and expands. Use an online ticket-tracking system for change requests. Updates are always scheduled to ensure the style sheets are tested and work properly with new configurations.
